

## Internet Security

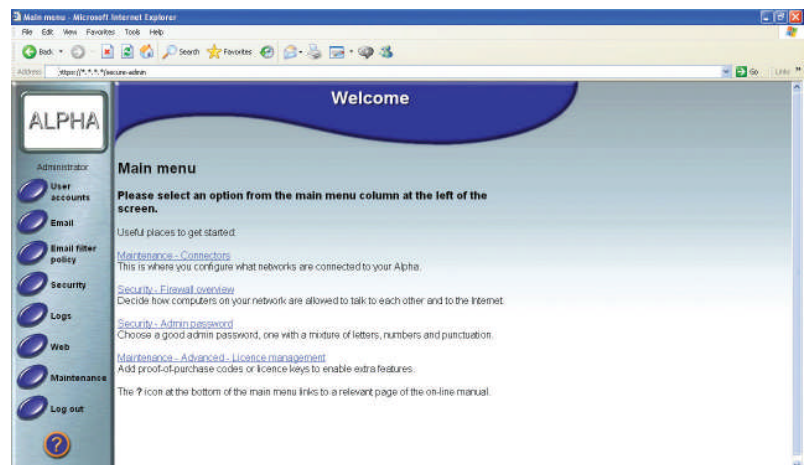

### NetPilot integrates key communications, networking and server elements, together with an unparalleled array of threat management options into a 'Single Secure Appliance'

Many organisations make Internet access a lot more complicated than it really needs to be. With NetPilot, Internet access and email is straightforward and secure, regardless of the size of your organisation.

Our most popular model in the range is the NetPilot Plus, supporting up to 100 users for web browsing and email. The high-performance NetPilot Plus comes with all the security options necessary to get businesses communicating securely across the Internet. It has been designed to offer total connectivity flexibility, with high-speed WAN options as well as multiple Ethernet interfaces for tasks such as DMZ or segregated user LANs. First year subscriptions to all Unified Threat Management options are bundled in with the unit and include Anti-Virus, Anti-Spam, Anti-Spyware email policy controls, advanced firewall, IDS/IPS and URL content filtering.

Other models in the range include the NetPilot Lite and NetPilot Enterprise. The Lite is designed for up to 15 users and the Enterprise for up to 500 users. Each has the same features as the Plus but with reduced and increased processing power respectively to accommodate the number of users. The Enterprise also features mirrored hard disks for increased resilience and is available in either a 2U rack mounted case or in a floor standing Tower case. All models feature a standard web interface for easy configuration and management.

NetPilot monitors and reports on a range of activities including online time, the number of incoming and outgoing emails by user, web usage by time of day, and firewall rejects. These reports can be automatically collated and sent as a daily email to a system supervisor.
