

## Server Hosting

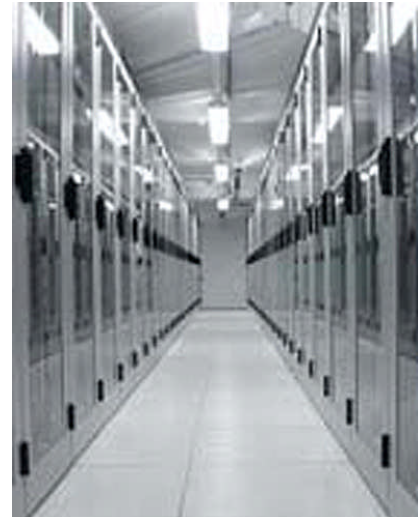

**Are you concerned about the environmental conditions that your servers are operating in? Is there a risk of theft? Is your location susceptible to flooding or other natural disasters? If you have multiple sites, what would happen if you lost the communications links to where your server is located?**

If you answered yes to any of the above questions then a hosted server solution is the answer. By taking the server away from your premises and installing it in an environmentally protected, secure location not only do you give your servers the best possible conditions to operate in but you also gain immediate disaster recovery benefits by protecting your servers against a disaster at your premises.

As a Platinum customer you can choose to locate your servers within our fully secure and resilient BS7799 certified data-centre environment. Platinum's hosting service increases the availability, reliability and performance of business applications across your entire organisation. It also enables you to avoid passing traffic unnecessarily over the link to your HQ.

### Key Features

- BS7799 certified data centre
- Controlled environmental conditions
- Extensive fire suppression equipment
- Access for authorised personnel only
- Reduce bandwidth usage on Head Office link for multi-site companies
- Decrease reliance on Head Office communications link for multi-site companies
- Removes the threat of local disasters such as flooding
- Negate the need to rely on internal staff to carry out routine tasks such as tape changes

By combining a hosting service with some of our other services such as our MPLS Wide Area Networking solutions, server maintenance and disaster recovery services, Platinum can provide you with a one stop shop that gives you the ultimate in protection for your core servers and data.
